

42TECHNOLOGY

(p)Control is a SCADA control system for power generation sets. The system supports all ComAp controllers such as IntelliSys, IntelliGen or IntelliMains (NT line as well as Classic line).

(p)Control fills the gap between ComAp software packages and the use of an expensive graphical power station control system. (p)Control combines in an ideal way the functionality for plant monitoring and control of a variety of ComAp software products such as WinEdit/ MultiEdit (GenConfig/IntelliMonitor), WinScope or Supervisor in one package, customised without overhead.

(p) Control SCADA SYSTEM FOR COMAP CONTROLLERS

***All in one software,
as per customer needs...***

info@42technology.ch, www.42technology.ch

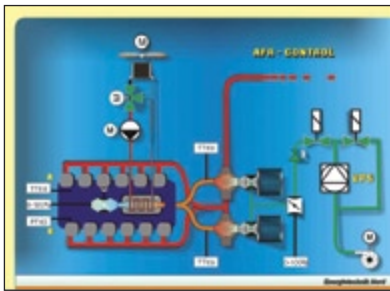

- Plant overview, generating set details
- Auxiliaries and single line diagrams
- Genset start and stop, mode change, reset
- Valve, breaker and auxiliaries commands
- Charts, trends, alarm lists and history
- Parameter change, value lists
- Fleet and service management
- Consumption and efficiency reports

(p) Control

SCADA SYSTEM FOR COMAP CONTROLLERS

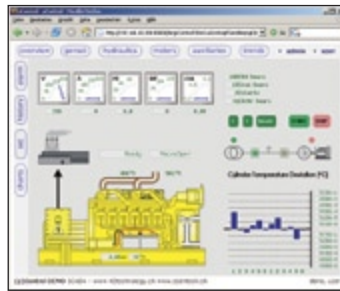

(p)Control runs on touch panels mounted onto the local control cabinet as well as on a standard PC hardware. The system is operated by a standard web browser such as the Microsoft Internet Explorer or Mozilla Firefox. This approach offers a far range of access options. The customer can choose from all signal sources to create his own chart files for data analysis during commissioning and plant operation.

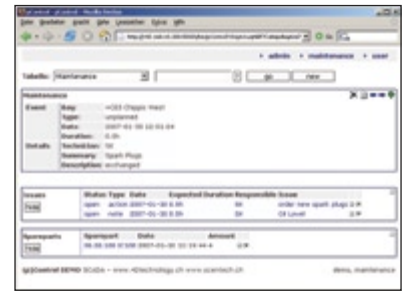

Create or maintain your corporate identity

- Use your own drawing program
- Create your vector files with your library
- Use us as your design studio

Edit the readings and control buttons into the graphic file

- Dynamic symbol library, drag and drop
- Meters, readings, breakers, valves...
- Automatically generated object code list
- Save files and upload into database

Service and fleet management

- Alarm reporting
- Spare parts database
- Service report generation
- Data management
- Efficiency tracing
